**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 5-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Mishima et al. (5,600,680).

Regarding claim 1, Mishima discloses a television receiver showing a shifting means (30, 29, 28, 19, 17); and a control means (18, 16, 14, 13).

Regarding claim 2, Mishima further shows a oscillating circuit (30, 29), an oscillator (28), and a capacitor (19,17).

Regarding claim 3, see variable capacitor 17.

Regarding claims 5-10, in addition of above, Mishima is intended to generate any IF frequency based on the equation (1) as shown in column 4.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mishima et al. (5,600,680).

Regarding claim 4, Mishima does not specify the switch, and the first and second parallel connected capacitors. In any event, the variable capacitor 17 Mishima is nonetheless the equivalent of the parallel-connected capacitors as claimed because the variable capacitor 17 is able to provide both of the capacitances. The examiner takes Official Notice that a variable capacitor can be constructed either by a varactor, mechanical parallel plates, or a plurality of capacitors with different values connected in parallel. All these variable capacitors are well known in the art and interchangeable with each other. Hence, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to replace the varactor of Mishima with a parallel connected capacitor circuit to perform the well known functions as claimed.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Usui (5,203,032) shows a variable voltage device 17.
